INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: Witteveen+Bos

Who we are

Witteveen+Bos' engineers and consultants possess an intrinsic drive to resolve complex issues and help society to progress. The energy transition, climate adaptation, flooding problems, healthy cities, circular economy and large-scale replacement of infrastructure are only some of the major challenges that we can help with. Witteveen+Bos advises and helps clients in making the right choices. At the core, our work is about knowledge: bringing together the right expertise to help solve these challenges in a sustainable manner.

Contributing to a sustainable society

As an engineering and consultancy firm, we advise and help clients all over the world in resolving today's complex challenges. With a network of 21 offices in 11 countries and some 1,200 engineers and consultants, we work on improving the human environment for everyone, today and for future generations. Together with our stakeholders, we contribute to social, ecological and economic progress, with the sustainable development goals of the United Nations serving as an inspirational guideline.

Every year, we complete some 3,000 projects in the fields of infrastructure, water, the environment and construction. In these projects, our aim is to maximise value creation. That means sustainable solutions for society, maximum value for clients, and opportunities for talent development for our employees.

Our Hydrogen expertise

We believe that energy storage with hydrogen is key to the energy transition. Therefore we contribute to the development of green hydrogen production for industry, transport and built environment. To improve the business case of green hydrogen we also seek solutions to utilize the oxygen and heat produced. We also are involved in development of breakthrough technology for large scale energy storage using hydrogen bromide flow batteries.
