INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: ETI Electro Technical Industry

Company Profile

Your electrical power problem is our challenge. ETI has been a trusted name in the field of reliable transformers for over sixty years. Standard transformers but also custom-made transformers. These products can be made entirely according to your specifications. Based on the situation you sketch out, our designers will create the best solution. In a very short period of time we can supply you with a product that meets your specifications, so you can be assured of an unimpeded progress in your production.

This also applies to our Wires, Line Conditioners and Power Units. In short: there are no voltage problems, only voltage challenges.

Program and applications:

The product programme includes: transformers, line conditioners, power units, wiring, specials and composites.

Some of the applications and market segments: Medical equipment, Analytical equipment, Electrical installations, Panel building, Rail infrastructure, Mechanical engineering, etc.

Innovation

The future demands new solutions and the drive for innovation within ETI means that the combination of green energy such as hydrogen in combination with (magnetic) wireless energy conversion is the subject of thought and study.
