INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: Batenburg Installation Technology

Batenburg Techniek is a technical service provider that operates in the heart of the smart industry. More than 1,000 employees are specialised in industrial automation, supply industrial components and provide for their installation. Batenburg Techniek enters into long-term partnerships and so realises successful projects.

Distinguishing features here are creative problem-solving capacity and an energetic working attitude. We help our clients here with the steps towards a sustainable and circular economy. This is reflected in our theme: Smarter Focus. Brighter Tomorrow. A theme that is more topical today than ever. Batenburg Techniek works through three divisions in five markets.

The Batenburg Installation Technology division focuses on installations in and sustainability of commercial properties and offices. With innovative solutions, the division also specialises in projects related to energy transition (sustainability, energy technology, electrical transportation and renewable energy) and security (security and camera technology).

From Monster, we work throughout the Dutch 'Westland', The Hague, Rotterdam and the surrounding area.

The energy transition

In the energy transition, we make major steps possible for our customers, for example with e-mobility, hydrogen, solar energy, wind energy, geothermal energy and energy storage. In installation contracting, energy saving and CO2 reduction, in new-build and renovation projects, are standards in our projects. We work to achieve environmental gains wherever possible.
