INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: Van Dorp Installaties

Van Dorp is an innovative and sustainable technical service provider, with 20 branches and 1300 employees throughout the Netherlands. Technology is our basis, but our added value lies mainly in providing total technical and facility services.

At Van Dorp Deventer (the project participant), technical management of installations is based on solid craftsmanship and we work on sustainable solutions.

Van Dorp offers a total package of technical services and installations. With a team of experienced and committed employees, all technical services in buildings are designed in the own organisation, realised and managed. Sustainability and savings on natural resources such as electricity, gas and water are central to all services.

We find it very important to pay a lot of attention to the personal and professional development of our employees. In our own training centre we offer various practical training courses that are geared to the latest sustainable developments. All Van Dorp branches are accredited as training companies and meet the set requirements.

Energy Concepts

Grip on energy consumption and energy transition is more than ever an important item, to reduce energy consumption. Van Dorp can help you to realise a sustainable and energy efficient building, in which people can work and learn in comfort. Using our smart techniques and new energy concepts. We take care of the entire process from advice, design, realisation and management.
